EDUCATION

University of South Florida

B.S. in Computer Science - GPA: 3.97 / 4.00

Tampa, Florida

Expected Graduation, May 2028

SKILLS

Programming Languages: Python, Dart, JavaScript, Typescript, Node.js, SQL, C, C++

Tools/Frameworks: React.js, Flutter, Git, Django, Figma, Firebase, Tailwind CSS

WORK EXPERIENCE

Tech Specialist

BRASA Connect

Tampa, Florida

Jul 2025 - present

- Sole developer of the conference web app built with Flutter and Dart, serving **360+ participants** across event scheduling, NFC networking, a mentorship platform, and live Q&A panels.
- Engineered a mentorship session platform enabling speakers and participants to schedule and manage sessions - resulting in **200+ meetings**.
- Developed an NFC-powered networking system, driving **1930+ participant connections** throughout the conference.
- Managed a Firebase database handling **300+ student resumes**, user and recruiter profiles, and initiative registrations - ensuring real-time data integrity across all app features.
- Created a real-time WhatsApp messaging system via Node.js enabling organizers to reach participants directly, reducing communication delays throughout the event.

Student Experience Leader

USF World

Tampa, Florida

Aug 2025 - present

- Organize and publish educational events to USF World's International Student Support website, reaching students across **140+ countries** and supporting international student engagement at USF.
- Lead and supervise **50+ events per semester** by managing budgets, coordinating logistics with student organizations, and implementing inclusive programming for a global student community.

PROJECTS

NovaBay

React.js, Python, SQL, GIS APIs → [Github](#)

Tampa, Florida

Apr 2026

- Won HackUSF's Climate Teach-in Sustainability Challenge out of **80+ teams**, building a MapLibre GIS platform querying **50K parcels** for a real-time flood risk and coastal viability analysis using live government APIs and Claude AI.
- Built an interactive blueprint sandbox with real-time Eco Index and Resilience Score metrics evaluating sustainability and flood resistance, backed by Supabase.
- Presented NovaBay to the **Tampa Bay Planning Council** and the Mayor of Largo as part of a civic audition.

RentEscrow

Solidity, Python, Next.js, TypeScript → Prototype: [Github](#) - Final Project: [Github](#)

Tampa, Florida

Mar 2026

- As part of Code & Croak Hackathon, developed a decentralized escrow protocol on **Ethereum Sepolia** with Solidity smart contracts featuring a 5-stage lifecycle and Aave integration to generate yield on rental deposits - targeting international students paying rent across borders.
- Built a Next.js frontend with wallet connectivity and a real-time on-chain state sync, backed by Dockerized Python FastAPI indexer for blockchain data - validated with live Metamask test transactions on Sepolia testnet.
- Refined the hackathon prototype and presented the project to founding members of **Credit**.

Free Food Newsletter

Python, APIs → [Github](#)

Tampa, Florida

Sept 2024

- Built an automated scraper using Python and Selenium monitoring **40+ USF events** weekly, leveraging OpenAI and Perplexity APIs to identify and surface free food opportunities for students.
- Designed a subscription-based newsletter pipeline delivering AI-curated alerts to **59+** subscribers, with automated scheduling and secure API key management.

ACTIVITIES & LEADERSHIP

Brazilian Student Association at USF | Professional Development Analyst

Association for Computer Machinery at USF | Project Member

Tampa, Florida | Jul 2025 - present

Tampa, Florida | Jan 2025 - May 2025
